

## HRIS ADMIN GUIDE

# Employee 201 File Manual

A simple guide for HR and Admin users on how to upload, review, track, and report employee 201 file documents in the HRIS.

Written for non-technical users. No database or system knowledge is required.

---

Upload employee documents

---

Track missing requirements

---

Review and verify files

---

Monitor expired documents

---

Prepare completion reports

# 1. What Is A Digital 201 File?

A 201 file is the employee's official HR file. In this system, the physical folder becomes a secure digital folder.

## What HR Can Store

- Resume or CV
- Employment contract
- Government IDs and records
- SSS, PhilHealth, Pag-IBIG, and TIN documents
- Medical certificates and clearances
- Training certificates
- Performance and disciplinary documents

## Why It Helps

- HR files are easier to find.
- Missing documents are easier to track.
- Expired documents can be monitored.
- Employee files are kept in one organized place.
- Reports show who has complete or incomplete files.

**Important:** 201 files contain private employee information. Only authorized Admin and HR users should manage these documents.

# 2. Open The 201 Files Module

Use the Admin workspace to open the 201 file management page.

## Steps

- 1 Log in to HRIS**  
Use an Admin or HR account.
- 2 Go to Admin Workspace**  
Open the admin side of the system.
- 3 Open Organization**  
Look for the Organization menu in the sidebar.
- 4 Click Employee 201 Files**  
This opens the document management page.

## Available Views

| View            | Purpose                                                                      |
|-----------------|------------------------------------------------------------------------------|
| Employee File   | Upload, review, view, and delete employee documents.                         |
| Checklist Setup | Review the default categories and required document list.                    |
| Reports         | Check file completion, missing files, expired files, and expiring documents. |

If the page is empty the first time you open it, click Create Defaults. This creates the standard 201 file categories and checklist items.

# 3. Create The Default Checklist

The default checklist gives HR a starting list of common employee documents.

### Click Create Defaults

Use this if categories or required documents are not yet available. The system will add standard HR document folders and checklist items.

### What It Creates

Categories such as Personal Documents, Employment Documents, Government Records, Payroll Documents, Training, and Exit Documents.

### When To Use It

Use it once during setup. If defaults already exist, the system will not duplicate the same standard items.

| Default Required Document              | Purpose                               |
|----------------------------------------|---------------------------------------|
| Resume / CV                            | Employee background and work history. |
| Valid Government ID                    | Identity verification.                |
| Employment Contract                    | Signed employment agreement.          |
| SSS, PhilHealth, Pag-IBIG, TIN Records | Government and payroll documentation. |
| Bank Account Form                      | Payroll bank details.                 |

# 4. Upload A Document

Upload documents from the Employee File view.

## Steps

- 1 Select an employee**  
Use the employee list on the left side.
- 2 Click Upload Document**  
This opens the upload form.
- 3 Enter document details**  
Add title, category, requirement, expiry date if needed, and remarks.
- 4 Select the file**  
Choose the PDF, image, or document from your computer.
- 5 Click Upload**  
The file will be stored in the employee's 201 file.

## Fields In The Upload Form

| Field       | Meaning                                            |
|-------------|----------------------------------------------------|
| Title       | Name of the document, such as Employment Contract. |
| Category    | Folder where the document belongs.                 |
| Requirement | Checklist item connected to the upload.            |
| Expiry Date | Use this for documents that expire.                |
| Remarks     | Optional notes for HR reference.                   |

Tip: If you upload from a missing checklist item, the system already fills in the matching requirement for you.

## 5. Understand Document Status

Status tells HR what action is needed for each document.

| Status    | Meaning                                                      | What HR Should Do                                                              |
|-----------|--------------------------------------------------------------|--------------------------------------------------------------------------------|
| Missing   | The required document has not been uploaded yet.             | Ask the employee to submit the document or upload it if HR already has a copy. |
| Submitted | The document has been uploaded but not yet confirmed by HR.  | Open the file, check if it is correct, then mark it Verified if acceptable.    |
| Verified  | HR has reviewed and accepted the document.                   | No action needed unless the document expires or must be replaced.              |
| Rejected  | The uploaded document is not acceptable or needs correction. | Add remarks so HR knows why it was rejected and request a replacement.         |
| Expired   | The document expiry date has already passed.                 | Request an updated document from the employee.                                 |

For documents with expiry dates, always enter the expiry date during upload. This helps the Reports view show expired and expiring documents.

## 6. Review, View, Or Delete A Document

HR can review documents from the Uploaded Documents table.

### View

Click the View button to open the file.  
The system creates a temporary secure link so HR can preview or download the document.

### Review

Click the Edit or Review button to update the title, category, requirement, status, expiry date, and remarks.

### Delete

Click Delete only when the document was uploaded by mistake or must be removed. Deleted files are removed from the employee file.

### Recommended Review Habit

- Open the document first before marking it Verified.
- Use Remarks when rejecting a document.
- Enter expiry dates for IDs, clearances, medical certificates, and permits.
- Do not delete documents unless you are sure they are not needed.

# 7. Use The Reports View

The Reports view helps HR monitor employee file completion.

## What The Report Shows

- Completion percentage
- Required document count
- Submitted document count
- Verified document count
- Missing document count
- Expired document count
- Expiring soon document count

## How HR Can Use It

- Find employees with incomplete 201 files.
- Follow up missing required documents.
- Request updated copies of expired files.
- Prepare HR compliance summaries for management.

A 100 percent completion means all required checklist items have a submitted or verified document. HR may still review whether each file is complete and acceptable.

## 8. Good 201 File Practices

These habits keep employee files clean, useful, and safer to manage.

### Do This

- Use clear document titles.
- Connect uploads to the correct requirement.
- Mark documents Verified only after checking them.
- Use expiry dates when applicable.
- Review the report regularly.

### Avoid This

- Uploading the same document many times.
- Leaving unclear file names without a proper title.
- Marking files Verified without opening them.
- Sharing employee documents outside authorized HR channels.
- Deleting files without confirming they are not needed.

Privacy reminder: 201 files may contain IDs, government numbers, medical documents, payroll documents, and other sensitive records. Handle them carefully and limit access to authorized HR/Admin users.
